The Internet Keeps a Record of You. Read It First.

Deepinfo is a Continuous Threat Exposure Management platform built on its own index of the internet.

400M+	2B+	200B+	30B+
domains across every TLD	subdomains discovered and resolved	DNS records cumulative, with history	SSL certificates indexed

Underneath Every Module, Our Own Index.

Many platforms rent their view of the internet. Deepinfo collects its own, resolves it and keeps it with its history.

400M+ domains	Registered domains across every TLD, with registration, WHOIS history and daily deltas.	DOMAIN SEARCH · FEEDS · WHOIS
2B+ subdomains	Subdomains discovered and resolved to the IP addresses they point to.	SUBDOMAIN FINDER · FEEDS
200B+ DNS records	Every observed DNS record, kept with its history, so infrastructure can be traced back in time.	DNS LOOKUP · DNS HISTORY · REVERSE IP · REVERSE MX · REVERSE NS
30B+ SSL certificates	Certificates collected and indexed. The names a certificate covers often reveal hosts nobody announced.	SSL LOOKUP

Every Module, One Dataset.

External Attack Surface Management	Map everything you own on the internet. Especially what you forgot. Reads: Domains, subdomains, IPs, DNS, certificates, ports, technologies.	EASM
Cyber Threat Intelligence	Some of your data is already out there. Reads: Breach dumps, infostealer logs, dark web forums and markets, threat actors.	CTI
Brand Risk Protection	Find the domains built to look like you. Reads: Lookalike domains, social platforms, app stores, search results.	BRP
Third-Party Risk Management	Your vendors' exposures are yours too. Reads: Vendors, suppliers and subsidiaries, scanned as thoroughly as your own assets.	TPRM

Deep Search & Insights

The index under every module, open to your team.

Reads: The index itself: domains, DNS, WHOIS, SSL, vulnerabilities, dark web.

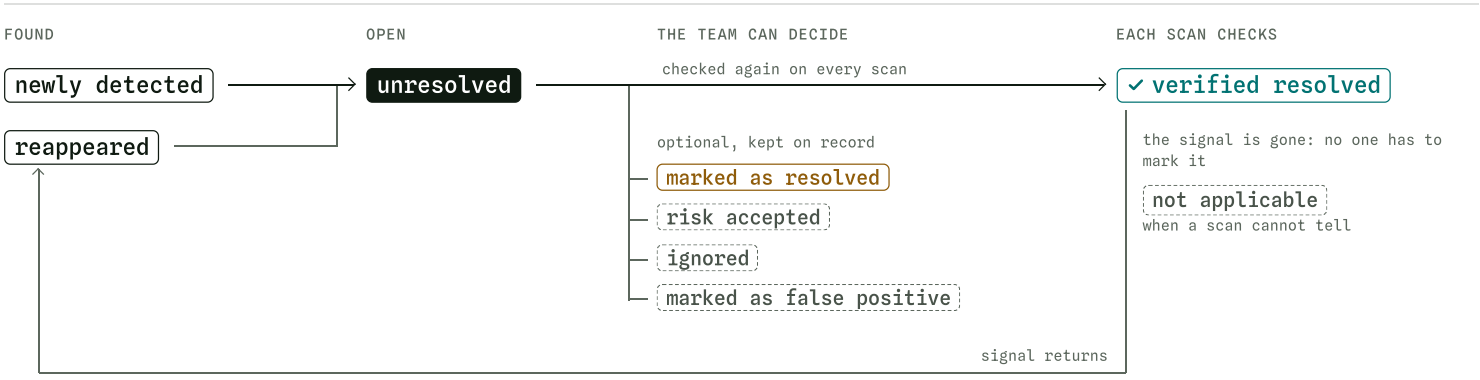
DSI

Every Layer, Every Asset.

LAYER	WHAT IS COLLECTED
Whois	Registrar, registration and expiry dates
IP Whois	ASN, network owner, country
DNS	A, AAAA, MX, NS, SOA, TXT and other records
SSL	Certificate, issuer, validity, covered names
Ports	Open TCP and UDP ports and services
Web data	Content, technologies, login pages, screenshots
HTTP	Response headers and status codes

Every Finding Gets a Score, an Owner and a State.

Vulnerabilities are ranked with CVSS, EPSS and CISA KEV together. Each issue then moves from state to state until a rescan confirms it is gone.



10,000+ Organizations Work From Deepinfo Data.
